

Empowering Lloyd's London Insurance Market: Building Cyber Resilience with Coro,

Cybersecurity Made Easy

Comprehensive Protection Tailored for Lean IT Teams

Justine Weinblatt-Weir – Snr Channel Manager

Cybersecurity Challenges for Lloyd's London Insurance Market

- Insurers manage confidential policyholder data that is highly valuable to attackers.
- They facilitate transactions in an increasingly remote, digital-first environment, broadening attack surface (cloud email, WiFi, remote access, device sprawl).
- Regulatory requirements (GDPR, insurance standards) demand demonstrable protection of personally identifiable information (PII), protected health information (PHI), and more.
- Most insurers have limited in-house IT/cybersecurity expertise or budget; their existing security stack can be fragmented and inefficient.

Gartner's Vision for Converged Security

Gartner®

Gartner acknowledges Coro as a key vendor delivering this platform solution.

By 2029, 30% of midsize organizations will have converged their workspace, data security and identity security capabilities into a strategic workspace security platform, enabling holistic protection and centralized policy management.

Coro is recognized in two key reports:

1. Innovation Insight for Security Platforms
2. Emerging Tech: Techscape for Detection and Response Startups

Overview: Coro's Consolidated Cybersecurity Platform

Private & Confidential

Coro offers a modular platform comprised of 14 integrated security modules for comprehensive, scalable protection.

Modules cover essential domains: endpoint protection, email security, secure access (SASE), cloud and data governance, anti-phishing, encryption, and more.

Features a single, unified dashboard (“single pane of glass”) for simple deployment, policy management, and alerts—reducing need for multiple, conflicting security tools and extra staff training.

Flexible contract models: brokers can self-manage or opt for Coro's managed service.

Single Platform. Stronger Security.

Why Coro Is the Right Choice for Lloyd's London Insurance

- ➞ **Regulatory Compliance Made Easier:**
Coro's platform scans endpoints for PII, PHI, PCI (payment card info), NPI (non-public info), and supports compliance documentation. Automated threat detection and response helps avoid regulatory penalties and reputational damage.
- ➞ **Integrated, Comprehensive Security—No Blind Spots:**
Consolidates endpoint security, data governance, cloud protection, and email security—eliminating gaps and operational complexity. One dashboard manages everything, slashing operational burdens for lean IT teams common among insurers.
- ➞ **Industry's Lowest Cost of Ownership:**
Coro's consolidated approach reduces the cost of ownership to a third of comparable point solutions. No need for multiple vendor contracts, integration work, or extra employee training—modules can be activated or deactivated instantly as needs change.
- ➞ **Protection Tailored for Insurance Companies' Needs:**
Email security protects against ransomware, phishing, and impersonation threats common to Insurers. **Endpoint protection** secures devices used on and offsite. **Cloud security** monitors abnormal activity in key platforms like Office 365, Google Workspace, Salesforce, and Dropbox.
- ➞ **Easy to Use, Scalable, Automated**
User interface is intuitive, reduces need for repeated staff training (crucial for insurers' diverse teams). AI-driven automation handles 95% of alert workflows, allowing brokers to focus on client service and deals, not firefighting IT issues.

Summary: Tangible Benefits for Lloyd's Insurance Market

Simplifies regulatory compliance, critical for maintaining licence and client trust.

Protects every digital asset: endpoints, email, cloud, local and remote—meaning organisations are secure no matter how they work.

Cuts IT and security costs, operational workload, and risk exposure—empowering organisations to focus on business, not firefighting threats.

Modular, scalable design means brokers of any size can activate the protection they need, when they need it.
