Boost your business through Tokenized Securities-Notes Ben Davis

- Cryptocurrency- Derive value from the user base and how many retailers accept it as a form of payment.
- Utility Tokens- Derive value from the underlying protocol
- Security Tokens- investment purposes, used for the provision of dividends or equity etc..
- Stable Coins- Peg to a low volatile underlying asset. Derive value for how stable it can be in times of volatility.

The rise of Programmable equity

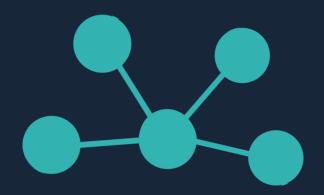

- Smart contracts are 'if, then' statements allowing tokens to be used in a program.
- Global access to markets
- No middlemen/ lower fees
- Access to the unbanked
- Security of a decentralized ledger without the headache of a decentralized business model

Security Tokens

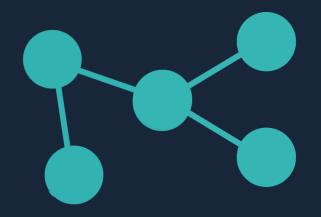

- Build your own security token
- Builds in KYC compliance
- Let's companies issue tokens based on an underlying asset with expectation of return
- Tokens that are meant to increase liquidity for a traditional illiquid market or asset i.e gold
- Stocks can now be tokens built on polymath

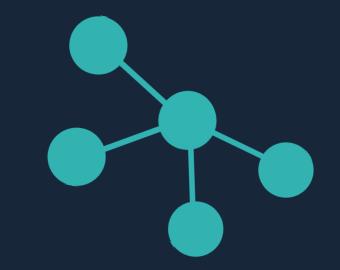

Implications and advantages of securitized tokens

- Mom and pop shops can now become a digital entity
- Using something like Polymath platform brings ICOs inline with SEC directives
- Can bring derivatives and other leveraged products to crypto
- Can tokenize many different things i.e funds, funds of funds, CDOs, ETFs etc..
- Policy Definitions- D&O, CGL policies

Harness the business-boosting power of the latest digital innovations in insurance
